Artem Letyushev

Technical Project Manager

Updated: 2026-11-04

I launch products and coordinate teams.

7+ years in tech. Led delivery for 5 teams, around 50 people.

Fintech, telecom and dating services.

artemletyushev@gmail.com · Telegram · GitHub · LinkedIn

About me

I have worked on mobile apps, payments, antifraud and corporate data. I help business and engineering agree on outcomes, set priorities and deliver. My engineering background lets me discuss APIs, data and architecture with the team.

I co-founded Curestry, a platform for debugging and evaluating AI agents, and the AI Engineers Guild community. I build open-source tools, mentor managers, and write and speak about software, AI and management. I started in Android development and my own studio.

Results

Twinby · Fraudulent users

2.5× fewer

Reduced the number of fraudulent users 2.5× as Product Owner by launching a nine-service antifraud platform. Estimated impact: $800K per year.

Twinby · Task lead time

64 → 16 days

Cut lead time from 64 to 16 days by building a backend team, introducing engineering standards and establishing regular releases.

Fintech · User retention

+15%

Led five teams launching apps in Mexico, India and Nigeria. Retention rose 15%; conversion from registration to deposit increased 10%.

Fintech · Release interval

−20%

Reduced the interval between releases by 20% by automating release preparation and changing the development process across a five-team unit.

MTS · Quarterly plan delivery

+15%

Improved delivery against quarterly plans by 15% by aligning priorities and dependencies across teams and adjacent business streams.

MTS · Time to market

2 → 1.5 months

Reduced time to market from 2 to 1.5 months by restructuring joint planning and coordinating dependencies between teams.

Work experience

Twinby — Tech Project Manager

03.2025 — present

Dating · matchmaking platform

A dating service with mobile apps and a website. Coordinated four teams: backend development, Data Science, systems analysis and the advertising platform. Owned the antifraud product as Product Owner.

Antifraud, moderation and user verification; audience segmentation and messaging; a business advertising platform; separate CIS and international environments.

Achievements

- As Product Owner, launched a nine-service antifraud platform: ML detection, device fingerprinting, automated moderation and liveness checks. The number of fraudulent users fell 2.5×. Estimated economic impact: $800K per year.
- Brought an audience segmentation and communications platform with 10+ channels to the launch stage. Defined how marketers select audiences, launch campaigns and evaluate results.
- Coordinated the release of separate platform versions for CIS and international markets. Teams separated data and infrastructure to meet regulatory requirements and investor conditions.
- Built the backend team and established regular releases. Task lead time fell from 64 to 16 days.
- Improved technical requirements with shared documentation, recorded architecture decisions, reviews and AI tools. Analysis preparation time fell by 60%.

My responsibilities

- Defined antifraud goals, priorities and success criteria with business, moderation and Data Science teams.
- Aligned plans, timelines, scope and dependencies across four teams. Managed capacity, risks and releases.
- Worked through API, data and integration requirements with analysts, developers and the architect.
- Investigated advertising platform customer needs and agreed change priorities.
- Reported to the CEO, tracked costs and team metrics, and coordinated incident reviews and issues requiring leadership decisions.

Fintech holding — Project Manager · NDA

06.2023 — 03.2025

Fintech · international mobile products

Mobile apps and internal services at an international fintech holding. Led delivery across five teams, around 50 people in Android, iOS, backend, DevOps, QA and analytics.

Regional mobile apps; payment flows and balance updates; deep links and domain delivery; image-data storage; regulatory separation of data.

Achievements

- Released apps in Mexico, India and Nigeria. Retention increased by 15%; registration-to-deposit conversion increased by 10%.
- Scaled the department from two to five teams. Four of the five team leads were promoted from within the department.
- Increased delivery from four to around twelve large epics per quarter.
- Reduced the interval between releases by 20% through automation and changes to the development process.
- Coordinated app deep links and a domain delivery service. CRM managers' workload fell by 7%.

My responsibilities

- Led mobile projects from business requirements and estimation through testing, publication and subsequent updates.
- Coordinated mobile teams with payments, authentication, infrastructure, CRM and shared holding services.
- Set priorities across product work, technical debt, infrastructure and process improvements.
- Hired and onboarded leaders, held one-to-ones, provided feedback and helped build development plans.
- Organised cross-team work on architecture, infrastructure and data separation under regulatory requirements.

MTS — Scrum Master / Agile Coach

01.2022 — 06.2023

Telecom · point-of-sale services and franchising

MTS Kassa and MTS Franchise: business, e-commerce and telecom products. Worked at team, product-area and cross-team management levels.

LeSS → SAFe transition; launch of a seven-team department; quarterly planning; Agile guild; process-improvement system.

Achievements

- At the Digital Transformation Office's request, led seven teams from LeSS to SAFe: five cross-functional teams and two service teams.
- Improved delivery against quarterly plans by 15% and reduced time to market from 2 to 1.5 months by coordinating dependencies with adjacent business streams.
- Launched an Agile guild to share practices and develop management skills.
- Introduced a shared improvement backlog: teams evaluated ideas, set priorities, checked results and limited concurrent work.
- Within a year, expanded from Scrum Master to Agile Coach, moving from team support to organisational change.

My responsibilities

- Aligned quarterly goals, capacity and dependencies across teams and neighbouring business areas.
- Helped teams plan work, clarify tasks, review results and remove blockers.
- Helped Product Owners prioritise work and connect tasks to product goals and customer feedback.
- Improved release preparation, defect triage, delivery metrics and ownership.

- Helped leaders redesign teams, develop team leads and prepare capacity, payroll and business performance data.

YooMoney — Delivery Manager

03.2021 — 01.2022

Fintech · electronic payments

Electronic payments and corporate analytics. Organised BI and Data Engineering teams and aligned work and results with business stakeholders.

Corporate data warehouse; Amundsen metadata catalogue; BI reporting; requirements for a unified delivery-metrics dashboard.

Achievements

- Delivered agreed quarterly commitments to 100% of business stakeholders' expectations.
- Coordinated roughly 90 business and technical participants, reducing friction in approvals and task handovers.
- Initiated a corporate data catalogue, organised an Amundsen prototype, user demonstrations and feedback.
- Developed a task-definition standard covering purpose, context, inputs, expected outcomes and acceptance criteria.
- Defined requirements for team delivery analytics: Jira data collection, metric calculation and Power BI reports.

My responsibilities

- Collected business requests, clarified requirements and helped prioritise a shared backlog.
- Planned analytics and Data Engineering work, removed blockers and coordinated dependencies.
- Agreed timelines, deliverables and changes with stakeholders, communicated progress and resolved disagreements.
- Prepared business cases and requirements for internal platforms, demonstrations and feedback collection.
- Analysed delivery speed, unfinished work and blocked tasks to improve timeline forecasts.

Itis Team — Project Manager

03.2020 — 03.2021

IT outsourcing · mobile and web development

Custom mobile and web development. Managed five to nine concurrent projects and contributed to team growth and the studio's project economics.

Beregi Figuru; Active Friends; Active Citizen; telemedicine; waste collection and plastic tracking; apps for entrepreneurs and industry reporting.

Achievements

- Increased project margins from 12% to 34% through automation and reusable software components.
- Contributed to a threefold increase in company revenue, including growth in average project value.
- Expanded the team from 5 to 18 people: developers, QA, designers and analysts.
- Increased team throughput from 7 to 16 tasks per week by reorganising work.

- Integrated QA into delivery: task and release checks, collaboration between testing and development, and defect management.

My responsibilities

- Planned multiple projects at once: priorities, timelines, specialist capacity and dependencies between engagements.
- Clarified customer needs, estimated work, defined the first product version and agreed commercial terms.
- Worked through user journeys, requirements, interfaces and external service integrations.
- Organised development, regular reviews, testing and acceptance using Kanban and team retrospectives.
- Contributed to hiring, project documentation and management tools, and tracked project economics.

Renewal Studio — Co-founder · Android Developer → Project Manager

2019 — 2020

Software development · project studio

Co-founded a mobile and web development studio. Started as an Android developer, then took responsibility for customers, teams and business operations.

GIS app with a map and AR markers; tourism service; ski resort and concert hall apps; social-media promotion web service; AR-mask research.

Achievements

- Brought the studio to break-even in two months.
- Won corporate clients, increasing project budgets by a factor of 3–4.
- Built three mobile and web development project teams.
- Established studio operations: roles, planning, change management and a transition to Scrum.
- Moved from development into project leadership while retaining hands-on Android, interface design and data experience.

My responsibilities

- Found customers, understood their needs, estimated projects and agreed terms.
- Assigned work to employees and external teams, monitored timelines and accepted deliverables.
- Described app functionality, user journeys and interface requirements.
- Reviewed defects and new requirements, and agreed changes to scope and timelines.
- Built Android apps in Java, worked with databases and set up team tools: Jira, Confluence and Slack.

Processes

I make multi-team work manageable: clear priorities, aligned dependencies, realistic commitments and timely feedback.

Areas of work

Project and Delivery Management, launching teams and departments, portfolio management, organisational change, leadership development, releases, quality and incident management.

Project examples

MTS: the LeSS → SAFe transition and launch of a unit with five cross-functional and two service teams; time to market fell from 2 to 1.5 months.

International holding: growing the mobile stream to five teams, developing team leads and shortening regression testing.

Twinby: regular backend releases, systems analysis, architecture reviews and engineering metrics.

YooMoney: managing business requests and coordinating BI/Data Engineering.

ITIS and Renewal: multi-project delivery, hiring, QA, project economics and customer relationships.

Methods and tools

Scrum, Kanban, LeSS, SAFe and Nexus; quarterly planning, risk and dependency management, facilitation, 1:1s and leadership development.

To improve flow, I use WIP limits, classes of service, lead time, cycle time, throughput and blocker analysis. For delivery quality: readiness and acceptance criteria, defect triage, release policies and incident reviews.

Tools: Jira, Confluence, Kaiten, YouTrack, Notion, Miro, GitLab, Excel/Google Sheets and Power BI.

People I worked with

Development teams and team leads, PMs and POs, department heads, CEOs, CTOs and CPOs, HR, finance, sales, support, external contractors and corporate clients.

Education and certifications

SAFe 5 Release Train Engineer; Scrum.org PSM I; ICAgile: Agile Coaching, Agile Team Facilitation, Agile Fundamentals; Kanban University: System Design, System Improvement.

Engineering

I started in Android development. I can investigate APIs, data models and architectural dependencies, discuss technical trade-offs and build a prototype to test an idea.

Areas of work

Mobile and web development, backend and microservices, payment integrations, corporate data warehouses, ETL/ELT, ML and computer vision, LLMs and AI agents.

Project examples

Twinby antifraud: ML detection, moderation, verification and device signals.

CDP/MQOS: segmentation, campaign orchestration, event streams and analytics.

CIS/global: separating regional application, data and infrastructure environments.

Amundsen at YooMoney: corporate data discovery, metadata and relationships between sources.

Mobile infrastructure: deep links, domain delivery, balance updates and image-data handling.

Personal tools: AI-STP, agent skills and MCP, Text-to-SQL prototypes and management analytics automation.

Technologies and tools

Hands-on experience: Java and Android, Python, SQL, Git, working with APIs, AI agents and automation.

Technology context of projects: Go, Kotlin, Swift, Flutter, JavaScript/TypeScript, Node.js, React, Angular and .NET; ClickHouse, CockroachDB, MSSQL, Redis, Kafka and NATS; DWH, ETL/ELT, CI/CD.

Design and documentation: API contracts, Swagger/OpenAPI, C4 diagrams, ADRs, GitLab, docs-as-code, architecture reviews and acceptance criteria.

People I worked with

Backend, frontend and mobile developers, architects, systems analysts, Data Engineers, Data Scientists, ML Engineers, DevOps, QA and information security specialists.

Background

My technical foundation is Android development, data work and my own software projects. I gained further practice in mobile products, platforms and AI tools.

Product

I start with user needs and business goals. I conduct research, formulate hypotheses, model the economics and determine what to build first.

Domains and areas

AdTech and MarTech: advertising platforms, audience segmentation, CDP, campaigns and personalised communications.

Dating and Trust & Safety: dating services, antifraud, verification, moderation and abuse prevention.

FinTech, Crypto and Betting: payments, balances, mobile products, user acquisition and retention in international markets.

Telecom, e-commerce and B2B: MTS products, digital business services, partner and corporate sales.

GovTech and city services: citizen requests, industry apps, interactions between residents, organisations and government bodies.

DeepTech, AI and Data: AgentOps, ML services, analytics platforms, corporate data and developer tools.

Product examples

Twinby: antifraud, advertising platform, and a segmentation and communications platform.

International holding: mobile apps for Mexico, India and Nigeria.

Curestry: a platform for debugging, quality evaluation and optimisation of AI agents.

Active Citizen: resident requests, voting and tracking request resolution.

Beregi Figuru: a mobile service for personal goals, nutrition and progress tracking.

Methods and tools

I conduct CustDev and problem interviews, build CJMs and examine user scenarios and competing products. I develop value propositions, model unit economics, define MVPs and set priorities. I work with funnels, conversion, retention, cohorts, CAC and LTV.

Tools: Miro, Figma, Google Sheets and Excel; SQL, Power BI, DataLens, AppMetrica and Google Analytics.

People I worked with

Product Managers and Product Owners, UX/UI designers, researchers, product and business analysts, marketers, CRM teams, sales, B2B clients and founders.

Education

Peter the Great St. Petersburg Polytechnic University · Innovation: innovative software product management. A product manager by education.
